

Pranav Iyer

Vadodara, Gujarat | +91 9589854112 | pranaviyeroff22@gmail.com
LinkedIn | GitHub | IPL Analytics Live App

Summary

Aspiring Data Analyst skilled in Python, SQL, Power BI, Excel, and Streamlit with hands-on experience in data cleaning, exploratory analysis, dashboard development, and deploying interactive analytics applications. Experienced in building analytics workflows, business intelligence dashboards, and AI-powered data analysis systems using Python-based technologies and Large Language Models (LLMs).

Technical Skills

Languages: Python, SQL

Analytics Tools: Power BI, Excel, Jupyter Notebook

Libraries: Pandas, NumPy, Matplotlib, Seaborn, Plotly

Deployment/Tools: Streamlit, Git, GitHub, VS Code

Concepts: EDA, Statistical Analysis, Data Cleaning, Data Modeling, SQL Queries, Data Transformation, Dashboarding, Reporting Automation, Business Intelligence, Basic ML Forecasting, LLM Applications

Projects

IPL Cricket Analytics Dashboard & Web Application

GitHub | Live App

- Built and deployed an end-to-end IPL analytics platform by processing 100k+ delivery-level IPL records using Python, Pandas, Power BI, and Streamlit.
- Performed exploratory data analysis, statistical aggregation, and reporting on 200+ IPL matches covering batting, bowling, venue, and match strategy insights.
- Developed analytical KPIs and SQL-style aggregations including strike rate, economy rate, wickets, dot balls, chasing win percentages, and phase-wise scoring trends.
- Designed an interactive Power BI dashboard and Streamlit web application with team and venue filters for live analytical exploration and business intelligence reporting.
- Structured processed datasets for dashboarding workflows, visualization pipelines, and deployment-ready analytics applications using GitHub version control.

LLM-Powered Data Analysis Assistant

GitHub

- Developed an AI-powered analytics assistant to automate dataset interpretation, exploratory analysis, and natural language analytics workflows using Large Language Models.
- Integrated LLM-based interaction with Python-driven data processing and reporting pipelines to simplify analytical tasks and insight generation.
- Built user-focused analytics workflows combining dataset upload, data transformation, automated insights, and visualization support.

Relevant Experience

Built and deployed independent analytics applications involving dashboarding, AI-powered workflows, live visualization systems, and business intelligence reporting using Python, Streamlit, SQL-based analytical concepts, and Power BI.

Education

Parul University, Vadodara

Expected 2027

B.Tech in Computer Science Engineering (Artificial Intelligence)

CGPA: 6.66

Class XII: 70%

Class X: 77%

Certification

The Ultimate Job Ready AI Powered Data Analytics Course – CodeWithHarry
